

Go Hands-Free with Glass Enterprise Edition 2 from Google

Pair the power of Glass Enterprise Edition 2 with BlueJeans Meetings to deliver the ultimate experience for front-line workers.

Maximize Productivity and Minimize Errors

Glass Enterprise Edition 2's hands-free, see-what-I-see capabilities enable remote field workers, such as warehouse workers, technicians, and engineers to improve efficiency when fulfilling customer orders or operating complex machines.

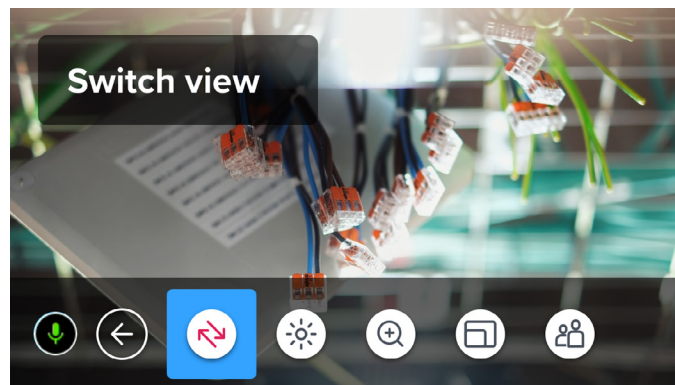

Join, Adjust, and Share Easily

Easily join a BlueJeans Meeting by using Glass to quickly scan a QR code from the BlueJeans Mobile app — no meeting IDs or passwords required — then use the Glass touchpad to navigate the settings and enable video, mute audio, view participants or content, zoom in or out, and even take a picture of what is being viewed.

Obtain a Clear Perspective

Glass' built-in 8MP camera allows workers to stream clear "point-of-view" video over Wi-Fi or a tethered cellular connection so remote coworkers can clearly observe the situation and troubleshoot in real-time. When purchased from Verizon, Glass comes preloaded with BlueJeans to deliver up to 720p HD video resolution and an immersive experience with spatial audio.

Harness the Power of Enterprise AR

Featuring the Qualcomm Snapdragon XR1 Platform, Glass uses onboard computer vision and machine learning to unleash next-generation technology and help bridge the gap between physical and digital to help front-line workers reach new levels of productivity. (Annotation coming late 2022)
